Hi Ann,

On behalf of our project team, I'm writing to share some updates about the remediation work at the Police Station property:

- We are continuing to work with the contractor on the **final steps** for the first phase of the remediation project. Remaining steps include: reseeding, replacing the super silt fence along the trail, and trench repair along the embankment. Again, the need for trench repair stems from stormwater runoff on the upland portion of the site, which has been remedied by the recently installed stormwater device (berm and swale).
- We are currently reviewing the second draft of the **Human Health and Ecological Risk Assessment** report. We are also awaiting an updated version of the **interim remedial measures** report. We will post/share the final versions with you when they become available.
- As we noted earlier, at the Town Council's December 2nd meeting they asked staff to issue a **request for qualifications (RFQ)** to compare costs for siting a new Municipal Services Center at the Police Station property (versus another location) and for generally exploring what can be done on the Police Station site. On [March 5th](#), the Council met again to receive an update on the remediation process and to discuss the results of the RFQ process. Council met again today in a work session format to discuss the redevelopment concept of the selected RFQ proposal team. The Council is continuing to explore its options and no decisions have been made. As always, we will continue to keep you posted on this and any other updates.

If you have any questions, please let us know. We plan to send another update in the next 45-60 days.

Thanks,
John

Subject: UPDATE - 828 MLK Jr Blvd, Chapel Hill, NC

Hi Ann,

On behalf of our project team, I'm writing to share some updates about the remediation work at the Police Station property:

- **Trail construction** is complete and our **final steps** for this phase of the remediation project include: reseeding, replacing the super silt fence along the trail, and trench repair along the embankment. The need for trench repair stems from stormwater runoff on the upland portion of the site, which has now been remedied by the recently installed stormwater device (berm and swale).
- Recently, our consulting team sent us an updated draft of the **Human Health and Ecological Risk Assessment** report, as well as a draft summary of all **interim remedial measures**. Our staff team is in the process of reviewing both documents now. We will share the final versions with you when they become available.
- At their meeting on December 2nd, the Town Council asked staff to issue a request for qualifications (RFQ) to compare costs for siting a new Municipal Services Center at the Police Station property (versus another location), and for generally exploring what can be done on the Police Station site.

If you have any questions, please let us know. We plan to send another update in the next 45-60 days.

Thanks,
John
