SECTION 1

INTRODUCTION

Falcon Engineering, Inc. (Falcon) completed an Environmental Site Characterization (ESC) Report for the Town of Chapel Hill property located at 828 Martin Luther King Jr. Boulevard in Chapel Hill, Orange County, North Carolina. The purpose of the investigation was to evaluate the on-site groundwater for potential impacts from previously identified coal combustion products (CCPs) within the property boundaries. Falcon has previously mobilized to the site in an effort to install, purge, and sample monitoring wells. However, due to the local recharge rates and the nature of the CCPs to increase turbidity the initial wells were either too turbid or ran dry before they could be adequately purged and stabilized. New wells were installed to greater depth and purged; however, due to inclement weather and time constraints the wells were initially sampled prior to stabilizing and therefore, did not yield accurate analysis of the dissolved phase contamination. This report discusses the initial sampling results from the reinstalled wells as well as the successful results of additional sampling performed after the wells were purged a second time and stabilized.

The most recent sampling activities were successful in sampling for dissolved phase constituents through monitoring the wells for stability and sampling immediately after purging. Sampling included the collection of three (3) groundwater samples from the two existing down gradient monitoring wells, one un-filtered sample each from MW3A and MW4A along with filtered MW4A samples due to the slightly elevated turbidity of 24.7 NTU in MW4A. This sampling event was monitored by the North Carolina Department of Environment and Natural Resources (NCDENR) through ongoing correspondence before and during the sampling event.

The following list provides the identified constituents (barium and boron) and their concentrations. The identified contaminant's do not exceed the 15A NCAC 02L .0202 Groundwater Standards. Hexavalent Chromium was not identified in the collected samples. It appears that the previously identified CCPs have not exceeded the groundwater standards down gradient of the landfill within the property boundaries.

MW3A	MW4A	MW4A Filtered
Barium – 67 µg/L	Barium - 64 µg/L	Barium – 61 µg/L
Boron – 520 µg/L	BRL	BRL

The Environmental Site Characterization (ESC) was conducted in general accordance with the January 2014 Inactive Hazardous Sites Program's Guidelines for Assessment and Cleanup. The assessment was performed on a property with the property identification number (PIN) 9789413949. Figure 1 (Appendix A) provides a general site location map of the subject property. An additional figure detailing sample locations is also provided in Appendix A of this report.

1.1 Site Location and Description

The evaluated property is approximately a 10.24-acre property located along Martin Luther King Jr. Blvd. in Chapel Hill, North Carolina. The site is located to the east of Martin Luther King Jr. Blvd., with development primarily focused in the northwest corner. The property is located immediately north of Bolin Creek, beginning approximately 200 feet north of the centerline of Hillsborough Street.

The property is currently developed with a 2 story structure approximately 25,000 square feet in size. There are also two parking lots and a few cargo containers used for storage present on site. The site is currently occupied by the Chapel Hill Police Department. The building is located in the northwest corner, with the majority of parking in the center of the site. The eastern and southern portions of the site are wooded.

1.2 Site History and Previous Scope of Work

The Town of Chapel Hill retained Falcon to conduct the ESC. Previous work conducted at the site (Phase I ESA & Limited Phase II) is detailed below and was previously provided under separate cover.

The past project goals of the Phase I were accomplished through the completion of the following tasks:

- Review of environmental databases and lists obtained from Federal, State, and local regulatory agencies including historic maps and directories of the site and the surrounding areas.
- Visual inspection of the subject site, including photographic documentation of existing conditions and notation of adjacent property use and conditions.
- Interviews with those knowledgeable of the site's history (as appropriate or required).

The past project goals of the Limited Phase II were accomplished through the completion of the following tasks:

- Sediment and groundwater sampling to determine the existing conditions within identified areas on the subject property. Sampling included two sediment samples and 3 water samples.
- Laboratory analyses of samples for Chemicals of Concern (COC).
- Comparison of analytical results to applicable criteria.

Based on findings of those investigations NCDENR requested the lab results from two down gradient monitoring wells. Falcon also conducted geoprobe drilling on site to better assess the extent of potential Coal Combustion Products (CCPs) on the subject property.

1.3 Current Project Objective and Scope of Work

The Town of Chapel Hill retained Falcon to continue efforts in completing the ESC. The purpose of the ESC was to further delineate environmental conditions present at the site in regards to the former use as a landfill. Previous work at the site is mentioned in the above section.

The current project goals of the ESC were accomplished through the completion of the following tasks:

- Abandonment of the two (2) original down gradient monitoring wells that produced highly turbid samples.
- Installation and development of two (2) new down gradient monitoring wells at increased depths.
- Sampling groundwater to determine the existing conditions within identified areas on the subject property.
- Laboratory analyses of samples for Chemicals of Concern.
- Comparison of analytical results to applicable criteria.

1.4 Current Land Use

The subject property was generally undeveloped until the current police station was constructed after 1980. However, as discussed in the Historical Usage section, it appears the site was used as a borrow pit in the late 1950's through early 1960's then as a fill site from the mid-1960's to mid-1970's. The site has been the home of the Chapel Hill Police Station since the town acquired it in 1980. During the site reconnaissance, it became apparent that fill materials including some coal combustion products (CCPs) were previously placed adjacent to a steep slope along the southern portion of the property.

1.5 Description of Soils

The US Natural Resource Conservation Service's Orange County Soil Survey provides two (2) different native soil types on the subject site:

- TaE – Tatum Silt Loam Complex (15 to 25 percent slopes) - well drained soil derived from red saprolite (50% of the overall subject site).
- WmE – Wedowee Sandy Loam Complex (15 to 25 percent slopes) - well drained soil derived from red saprolite (50% of the overall subject site).

1.6 Hydrogeologic Conditions

A review of the Chapel Hill, NC USGS 7.5-minute 1946 topographic map, which includes the project site, indicates that the site is located on varying elevations from 375 feet above mean sea level (msl) in the northwest corner of the site to 284 feet msl in the southeast corner where the site meets Bolin Creek. The 2010 Topographic Map from Orange County GIS indicates significantly different contours from the USGS maps. This data supports the filling and leveling of the site which would explain the soil/debris layers observed within the (previously taken) geoprobe soil profiles seen.

The site is bounded on the north and west by paved streets, to the east by residential developed woodlands and to the south by Bolin Creek. The general site drainage is to the South via overland flow and along stormwater trenches aside Martin Luther King Jr. Blvd. Stormwater drains from this site into Bolin Creek. Very little, if any, surface water comes onto the site from offsite.

The property and surrounding area are serviced by municipal water from Orange Water and Sewer Authority (OWASA) and does not currently utilize groundwater. Falcon contacted the Orange County Health Department (OCHD) to request information on potable water wells registered and/or known within the area. According to OCHD, the closest drinking water or other potable water well is located approximately 460 feet from the subject property. This well is located at 3 Mt Bolus Road and is up-gradient from the subject property. Known or registered down-gradient drinking water wells within 500 feet of site property line were not reported or visually observed by Falcon staff. The closest down-stream water supply system is Jordan Lake. The closest public water supply intake for this lake is located approximately 12.5 miles away from the subject property.

SECTION 2

METHODS OF INVESTIGATION

2.1 Monitoring Well Abandonment, Installation, and Development

During previous investigative efforts, three (3) groundwater monitoring wells had been installed, MW1, MW3, and MW4. MW1 was installed within the area of fill including some CCPs adjacent to the southwest corner of the Police Station Building. NC DENR requested the remaining two (2) wells (MW3 and MW4) be installed down gradient of the fill. MW3 was placed towards the western side of property within the wooded area north of Bolin Creek Greenway Trail. MW4 was placed towards the eastern side of property also within the wooded area north of Bolin Creek Greenway Trail. It should be noted that shallow depths and auger refusal were encountered. This may have been due to the natural geology and proximity to Bolin Creek. During previous attempts to collect samples, MW3 and MW4 produced insufficient groundwater with high turbidity readings that prevented accurate results. Results from these sampling activities were provided in previously submitted reports to NC DENR.

The first phase of this investigation involved abandoning MW3 and MW4. Trigon Exploration was contracted by Falcon to abandon the two wells on January 6 and 7, 2015, respectively. The Well Abandonment Records are provided in Appendix C of this report.

Additional phase of the investigation involved the installation of two (2) new down gradient monitoring wells, MW3A and MW4A, on May 12 and 15, 2015, respectively. Falcon contracted American Environmental Drilling, Inc. to complete well installation. MW3A was located directly down gradient of the exposed fill materials just outside of the fence north of the Bolin Creek Greenway Trail. MW4A was placed farther east towards the eastern property boundary and just outside of the gate to the fence north of the Bolin Creek Greenway Trail. Refer to Figure 2 in Appendix A for well locations. The installation depth of MW3A was 16.0 ft below ground surface (bgs) and the installation depth of MW4A was 19.0 ft bgs. The static water level depth at time of install for MW3A was 10.0 ft bgs and MW4A was 4.0 ft bgs. Drill cuttings and purge water were contained to the proximity of well locations through the use of earthen berms as needed. The well were constructed in accordance with 15A NCAC 02C .0100 or 15A NCAC 02C .0200 Well Construction Standards. Well Construction records are provided in Appendix C of this report.

The wells were purged on May 21-22 and July 20-22, 2015. MW1 was purged on Aug 5, and 6, 2015. The method of purging the wells was by low flow pumping. Per the established guidance, After installing the wells 24- hours was allowed for the surface pad and protective casing to cure

prior to purging. The wells recharged following adequate purging of five (5) or more well volumes. To determine the number of gallons within one (1) well volume, the following equation was used: (Total depth of water) X (0.48 –conversion to well volumes in gallons) = # of gallons to purge.

According to the US Environmental Protection Agency's (EPA's) Sampling Guidelines; "With respect to the ground water chemistry, an adequate purge is achieved when the pH and specific conductance of the ground water have stabilized and the turbidity has either stabilized or is below 10 Nephelometric Turbidity Units (NTUs)". While purging the three (3) wells, to determine when sampling could commence, a Hanna HI 98703 Turbidity Meter and YSI 556 MPS instrument were utilized to define turbidity, specific conductivity, temperature, and pH of groundwater within.

2.2 Groundwater Analytical Methods

Samples were analyzed for volatile organic compounds (VOCs), 1,4-dioxane, semi-volatile organic compounds (SVOCs), metals, and hexavalent chromium. Table 1 provides the analytical methods that were used in the collection of these samples. Analytical methods including laboratory quality control and quality assurance (QA/QC) procedures were performed by Prism Laboratories, Inc. (NC Certification No. 402).

Table 1 | Groundwater Analytical Methods

Groundwater Constituents	Analytical Method
Volatile Organic Compounds (VOC)	SW 846 Method 8260
1,4-Dioxane	SW 846 Method 8260 SIM
Semi-volatile Organic Compounds (SVOC)	SW-846 Method 8270
Metals	USEPA method for detection limits below the 15A NCAC 2L standards
Hexavalent chromium	USEPA Method 218.7 or 218.6 as modified by US EPA Region IV

2.3 Groundwater Sampling Methods

Sampling was done in general accordance with the January 2014 Inactive Hazardous Sites Program's Guidelines for Assessment and Cleanup (DENR Guidance\NC DENR Guidance Inactive Haz Sites.pdf) and the USEPA Technical Guidance (DENR Guidance\EPA Groundwater-Sampling.pdf) documents except as noted below. Sampling was performed following adequate

purging and after chemical parameter stabilization criteria have been reasonably met. According to the EPA sampling guidelines "Stabilization occurs when, for at least three consecutive measurements, the pH remains constant within 0.1 Standard Unit (SU) and specific conductance varies no more than approximately 5 percent."

SECTION 3

ANALYTICAL RESULTS

MW1, MW3A, and MW4A were initially sampled on May 26, 2015. The May 26 sampling event occurred before the wells met the chemical parameter stabilization criteria (as defined above) including low turbidity; therefore, the May sampling results are not an accurate indication of the dissolved phase concentration levels of the constituents of concern. However, most constituents were not identified during the May sampling event with the exception of the following metals: mercury, arsenic, barium, chromium, and lead. Table 2 below provides a summary of constituents of interest including those above the analytical reporting limits. A full laboratory report including QC/QA data is provided in Appendix D of this report.

Table 2 | May 2015 Initial Sampling Results (pre-well stabilization)

Constituent of Potential Concern (COPC)	Units	Sampling Locations			NC DENR GW Standard (15A NCAC 02L .0202)
		MW4A	MW3A	MW1	
Hexavalent Chromium	µg/L	BRL	BRL	BRL	N/A*
Mercury	µg/L	BRL	BRL	0.31	1
Arsenic	µg/L	BRL	42	110	10
Barium	µg/L	54	770	150	700
Boron	µg/L	BRL	BRL	BRL	700
Cadmium	µg/L	BRL	BRL	BRL	2
Chromium (total)	µg/L	BRL	460	98	10
Lead	µg/L	BRL	89	61	15
Selenium	µg/L	BRL	BRL	BRL	20
Silver	µg/L	BRL	BRL	BRL	20

* There is no 15A NCAC 02L .0202 Standard for Hexavalent Chromium, The Nation Primary Drinking Water Regulations set the Maximum Concentration Level for Total Chromium (which includes Hexavalent Chromium) at 100 µg/L. The 15A NCAC 02L .0202 Standard for Total Chromium is 10 µg/L

Falcon returned to the site to purge and sample the three (3) wells. The analytical methods were also the same as provide in Table 1 above with the exception of not sampling for VOCs and SVOCS. Not sampling for organic compounds was pre-approved by NCDENR due to not detecting organic compound's during previous sampling events.

MW3A and MW4A were purged of 9 well volumes on July 20 and 21 2015. MW3A stabilized with less than 10 NTUs. MW4A was also stable; however, the turbidity was at 24.7. NCDENR pre-approved filtered and non-filtered samples from MW4A. MW1 was purged of 17 well volumes on July 21 and 22 but did not stabilize. Turbidity remained in the mid 100 NTUs. MW1 was not sampled in July. MW1 was purged again on August 5 and 6, 2015 in another effort to obtain samples from a stable well with low turbidity. However, turbidly ranged from unreadable to the high 100 NTUs. MW1 was not sampled in August. Not sampling MW1 was also monitored by NCDENR before and during sampling due to MW1 being installed already within the landfill material and having previously documented contamination. Table 3 below provides a summary of constituents of interest including those above the analytical reporting limits. A full laboratory report including QC/QA data is provided in Appendix D of this report.

Table 3 | July 2015 Additional Sampling Results (post-well stabilization)

Constituent of Potential Concern (COPC)	Units	Sampling Locations			NC DENR GW Standard (15A NCAC 02L .0202)
		MW3A	MW4A FILTERED	MW4A	
Hexavalent Chromium	µg/L	BRL	BRL	BRL	N/A*
Mercury	µg/L	BRL	BRL	BRL	1
Arsenic	µg/L	BRL	BRL	BRL	10
Barium	µg/L	67	61	64	700
Boron	µg/L	520	BRL	BRL	700
Cadmium	µg/L	BRL	BRL	BRL	2
Total Chromium	µg/L	BRL	BRL	BRL	10
Lead	µg/L	BRL	BRL	BRL	15
Selenium	µg/L	BRL	BRL	BRL	20
Silver	µg/L	BRL	BRL	BRL	20

Values shown in **BOLD** are above the applicable standard

BRL = Below Reporting Limit

* There is no 15A NCAC 02L .0202 Standard for Hexavalent Chromium, The Nation Primary Drinking Water Regulations set the Maximum Concentration Level for Total Chromium (which includes Hexavalent Chromium) at 100 µg/L The 15A NCAC 02L .0202 Standard for Total Chromium is 10 µg/L

SECTION 4

SUMMARY OF FINDINGS

Falcon completed an ESC Report for the Town of Chapel Hill at 828 Martin Luther King Jr. Boulevard located in Chapel Hill, Orange County, North Carolina. The purpose of the investigation was to evaluate the on-site groundwater for potential impacts within the property boundaries.

Based upon our completed field activities and subsequent laboratory analysis Falcon was able to provide the following findings:

1. MW1 was purged for two (2) additional days but failed to stabilize and was not sampled;
2. Barium, and Boron were detected at a concentration below the NC DENR 2L Groundwater Standard at MW3A;
3. Barium was detected at a concentration below the NC DENR 2L Groundwater Standard at MW4A in both the filtered and unfiltered samples;
4. Hexavalent Chromium was not detected in either down-gradient well.

SECTION 5

RECOMMENDATIONS

Falcon recommends that this report be submitted to NC DENR for their further review to assist them in recommending next steps. Based on the sampling results, it appears the previously identified coal combustion products have not exceeded the groundwater standards down gradient of the landfill within the property boundaries. NC DENR will likely consider the Town of Chapel Hill Police Department a low priority site. Following NC DENR review Falcon is available to provide additional consultation and recommended courses of action to comply with possible next steps.

21. REMARKS			

22. Certification:

5-18-15

Date

By signing this form, I hereby certify that the well(s) was (were) constructed in accordance with 15A NCAC 02C .0100 or 15A NCAC 02C .0200 Well Construction Standards and that a copy of this record has been provided to the well owner.

23. Site diagram or additional well details:

You may use the back of this page to provide additional well site details or well construction details. You may also attach additional pages if necessary.

SUBMITTAL INSTRUCTIONS

24a. For All Wells:

Submit this form within 30 days of completion of well construction to the following:

Division of Water Resources, Information Processing Unit,
1617 Mail Service Center, Raleigh, NC 27699-1617

24b. For Injection Wells ONLY:

In addition to sending the form to the address in 24a above, also submit a copy of this form within 30 days of completion of well construction to the following:

Division of Water Resources, Underground Injection Control Program,
1636 Mail Service Center, Raleigh, NC 27699-1636

24c. For Water Supply & Injection Wells:

Also submit one copy of this form within 30 days of completion of well construction to the county health department of the county where constructed.

WELL CONSTRUCTION RECORD

This form can be used for single or multiple wells

1. Well Contractor Information:

Kelly Grant

Well Contractor Name

2730 A

NC Well Contractor Certification Number

American Environmental Drilling, Inc.

Company Name

2. Well Construction Permit #:

List all applicable well permits (i.e. County, State, Variance, E&L, etc.)

3. Well Use (check well use):

Water Supply Well:

- | | |
|--|--|
| <input type="checkbox"/> Agricultural | <input type="checkbox"/> Municipal/Public |
| <input type="checkbox"/> Geothermal (Heating/Cooling Supply) | <input type="checkbox"/> Residential Water Supply (single) |
| <input type="checkbox"/> Industrial/Commercial | <input type="checkbox"/> Residential Water Supply (shared) |
| <input type="checkbox"/> Irrigation | |

Non-Water Supply Well:

- | | |
|--|-----------------------------------|
| <input checked="" type="checkbox"/> Monitoring | <input type="checkbox"/> Recovery |
|--|-----------------------------------|

Injection Well:

- | | |
|--|--|
| <input type="checkbox"/> Aquifer Recharge | <input type="checkbox"/> Groundwater Remediation |
| <input type="checkbox"/> Aquifer Storage and Recovery | <input type="checkbox"/> Salinity Barrier |
| <input type="checkbox"/> Aquifer Test | <input type="checkbox"/> Stormwater Drainage |
| <input type="checkbox"/> Experimental Technology | <input type="checkbox"/> Subsidence Control |
| <input type="checkbox"/> Geothermal (Closed Loop) | <input type="checkbox"/> Tracer |
| <input type="checkbox"/> Geothermal (Heating/Cooling Return) | <input type="checkbox"/> Other (explain under #21 Remarks) |

4. Date Well(s) Completed: 5-14-15 **Well ID#** MW-4A

5a. Well Location:

CITY OF CHAPEL HILL

Facility/Owner Name

Facility ID# (if applicable)

828 Martin Luther King Blvd.

Physical Address, City, and Zip

ORANGE

County

Parcel Identification No. (PIN)

5b. Latitude and Longitude in degrees/minutes/seconds or decimal degrees: (if well field, one lat/long is sufficient)

35.925526 N -79.052109 W

6. Is (are) the well(s): Permanent or Temporary

7. Is this a repair to an existing well: Yes or No

If this is a repair, fill out known well construction information and explain the nature of the repair under #21 remarks section or on the back of this form.

8. Number of wells constructed: 1

For multiple injection or non-water supply wells **ONLY** with the same construction, you can submit one form.

9. Total well depth below land surface: 19 (ft.)

For multiple wells list all depths if different (example- 3@200' and 2@100')

10. Static water level below top of casing: 4 (ft.)

If water level is above casing, use "+"

11. Borehole diameter: 6" (in.)

12. Well construction method: AIR ROTARY

(i.e. auger, rotary, cable, direct push, etc.)

FOR WATER SUPPLY WELLS ONLY:

13a. Yield (gpm) _____ Method of test: _____

13b. Disinfection type: _____ Amount: _____

For Internal Use ONLY:

14. WATER ZONES

FROM	TO	DESCRIPTION
4 ft.	19 ft.	
ft.	ft.	

15. OUTER CASING (for multi-cased wells) OR LINER (if applicable)

FROM	TO	DIAMETER	THICKNESS	MATERIAL
.6 ft.	4 ft.	2 in.	SCH40	PVC

0 ft.	15 ft.	BROWN CLAY AND ROCK
15 ft.	19 ft.	GRAY BLACK ROCK
ft.	ft.	

21. REMARKS

<i>Kelly</i>
5-18-15

Signature of Certified Well Contractor

Date

By signing this form, I hereby certify that the well(s) was (were) constructed in accordance with 15A NCAC 02C .0100 or 15A NCAC 02C .0200 Well Construction Standards and that a copy of this record has been provided to the well owner.

22. Certification:

Kelly

5-18-15

Date

23. Site diagram or additional well details:

You may use the back of this page to provide additional well site details or well construction details. You may also attach additional pages if necessary.

SUBMITTAL INSTRUCTIONS

24a. For All Wells:

Submit this form within 30 days of completion of well construction to the following:

Division of Water Resources, Information Processing Unit,
1617 Mail Service Center, Raleigh, NC 27699-1617

24b. For Injection Wells ONLY:

In addition to sending the form to the address in 24a above, also submit a copy of this form within 30 days of completion of well construction to the following:

Division of Water Resources, Underground Injection Control Program,
1636 Mail Service Center, Raleigh, NC 27699-1636

24c. For Water Supply & Injection Wells:

Also submit one copy of this form within 30 days of completion of well construction to the county health department of the county where constructed.

WELL ABANDONMENT RECORD

This form can be used for single or multiple wells

1. Well Contractor Information:

Solon WENWELL (WHICHAW)

Well Contractor Name (or well owner personally abandoning well on his/her property)

2077-A

NC Well Contractor Certification Number

TRIGON EXPLORATION

Company Name

2. Well Construction Permit #:

N/A

List all applicable well permits (i.e. County, State, Variance, Injection, etc.) if known

3. Well use (check well use):

Water Supply Well:

- Agricultural Municipal/Public
 Geothermal (Heating/Cooling Supply) Residential Water Supply (single)
 Industrial/Commercial Residential Water Supply (shared)
 Irrigation

Non-Water Supply Well:

- Monitoring Recovery

Injection Well:

- Aquifer Recharge Groundwater Remediation
 Aquifer Storage and Recovery Salinity Barrier
 Aquifer Test Stormwater Drainage
 Experimental Technology Subsidence Control
 Geothermal (Closed Loop) Tracer
 Geothermal (Heating/Cooling Return) Other (explain under 7g)

4. Date well(s) abandoned: 1-7-15

5a. Well location:

Town of Chapel Hill

Facility/Owner Name

CONSTRUCTION DETAILS OF WELL(S) BEING ABANDONED

Attach well construction record(s) if available. For multiple injection or non-water supply wells ONLY with the same construction/abandonment, you can submit one form.

6a. Well ID#: NVV3

6b. Total well depth: 11 (ft.)

6c. Borehole diameter: 8 (in.)

6d. Water level below ground surface: 4 (ft.)

6e. Outer casing length (if known): _____ (ft.)

6f. Inner casing/tubing length (if known): _____ (ft.)

6g. Screen length (if known): 5 (ft.)

For Internal Use ONLY:

WELL ABANDONMENT DETAILS

7a. Number of wells being abandoned:

1

For multiple injection or non-water supply wells ONLY with the same construction/abandonment, you can submit one form.

7b. Approximate volume of water remaining in well(s): _____ (gal.)

FOR WATER SUPPLY WELLS ONLY:

7c. Type of disinfectant used:

7d. Amount of disinfectant used:

7e. Sealing materials used (check all that apply):

- Near Cement Grout Bentonite Chips or Pellets
 Sand Cement Grout Dry Clay
 Concrete Grout Drill Cuttings
 Specialty Grout Gravel
 Bentonite Slurry Other (explain under 7g)

7f. For each material selected above, provide amount of materials used:

7g. Provide a brief description of the abandonment procedure:

grout bentonite mix injected into well well cap removed pvc well pipe left in hole below ground surface

8. Certification:

Patricia W. Weller

Signature of Certified Well Contractor or Well Owner

1-7-15

Date

By signing this form, I hereby certify that the well(s) was (were) abandoned in accordance with 15A NCAC 02C .0100 or 2C .0200 Well Construction Standards and that a copy of this record has been provided to the well owner.

9. Site diagram or additional well details:

You may use the back of this page to provide additional well site details or well abandonment details. You may also attach additional pages if necessary.

SUBMITTAL INSTRUCTIONS

10a. **For All Wells:** Submit this form within 30 days of completion of well abandonment to the following:

Division of Water Resources, Information Processing Unit,
1617 Mail Service Center, Raleigh, NC 27699-1617

10b. **For Injection Wells:** In addition to sending the form to the address in 10a above, also submit one copy of this form within 30 days of completion of well abandonment to the following:

Division of Water Resources, Underground Injection Control Program,
1636 Mail Service Center, Raleigh, NC 27699-1636

10c. **For Water Supply & Injection Wells:** In addition to sending the form to the address(es) above, also submit one copy of this form within 30 days of completion of well abandonment to the county health department of the county where abandoned.

1.5 gallons
purged

* lunch

7/21/15 *turbidity pictures
document time

[Well 1] (total 2.5 gallons)

(B) 1 gallon purged

* Specific Conductivity meter
(HSI Env) 55 ft, cord (10m)
too short for sample

4th purge - turbidity too
high to detect on

turbidity meter

* Curtis came by to ask about
hex chromium / total chromium
standard for 2L guidelines.
(Which standard is 10?)

0.80 - 1 gallon 5th purge

6th purge -

Turbidity = 403 NTU
(8 purges)

Sampled wells MW3A &
MW4A

7/22/15 Well 1

10:45a 35.6' water level
40.7' bottom

$$5.1' \times 0.48 = 2.44 / 3 = 0.82$$

gallons
to purge

* Didn't sample (SC), temp,
pH due to cord length.
Not long enough (20m cord
(After purge) (on its way)
(Purge) Turbidity = 95.8 NTU
11:45a - new 20m cord to YSI
came.

(11 purges total) [3 so far]
(call chris
after 5
more)

4 purges (12 total since yesterday)

$$\text{Turbidity} = 92.2 \text{ NTU}$$

* 5 purges
Turbidity = 61.4 NTU
 $SC = 0.007 \text{ m}^3/\text{cm}^3$
Temp = 20.48°C pH = 6.35

12:40p - lunch

Started purging - 1:15p

6th purge (14) Water @ 35° 6"
(taken after purging for couple minutes)

Turbidity = 558 NTU sampled during 7th purge at 2:18p

$$SC = 1.809 \text{ m}^3/\text{cm}^3$$

$$\text{Temp} = 18.85^\circ \text{C}$$

$$\text{pH} = 6.46$$

2:30p - Generator ran out
of gas

Chris said to leave pump off
for an hour (break)

2:45p - filled generator w/
gas

8th purge

(before purge)

$$\text{Turbidity} = 201 \text{ NTU}$$

$$SC = 0.985 \text{ m}^3/\text{cm}^3$$

$$\text{temp} = 20.63^\circ \text{C}$$

$$\text{pH} = 6.28$$

Turbidity = 126 NTU
(after purge)

9th purge (17th)

4:15p - last purge for today

Turbidity = 156 NTU

SC = 1.887 ms/cm

temp = 22.05 °C

pH = 6.44
